EDUCATION

National University of Singapore

Bachelor of Computing in Business AI Systems (with Honours)

Aug 2025 – Present

ACHIEVEMENTS

- 1st place for Replit Hackathon 2026
- 2nd place for Cactus (YC S25) x Google DeepMind Hackathon Singapore 2026
- 2nd place for NUS Student Life Hackathon 2026
- CCSGP Public Service Fellowship Awardee
- AI Engineer Singapore Student Scholarship (1 of 20)

EXPERIENCE

Ecovolt Technologies Pte Ltd, *Software Engineer Intern*

Sep 2025 – Present

- Spearheaded and built an autonomous building feedback-loop orchestration system anchored on secure NFC-based occupant feedback collection, converting real-time input into closed-loop actuator control (e.g. automatic temperature regulation), one of the core products delivered under a six-figure building-wide contract
- Designed and built the company's AI agent harness end-to-end (tool-calling loop, streaming, retrieval pipeline), powering a RAG documentation assistant that cut support tickets 80% and an in-app agent enabling chat-driven actions
- Built a cross-platform mobile app for the Everest platform, extending device control and monitoring to iOS and Android
- Built a real-time inactive-device alert API and notification system monitoring 4,000+ devices, cutting downtime and manual inspection overhead

Assessmate, *Co-Founder*

Apr 2026 – Present

- Co-founded and built an AI case-note copilot for early childhood intervention assessors, architecting a privacy-first, on-premise LLM + RAG pipeline over anonymized templates to generate schema-compliant notes
- Currently piloting the tool with 2 assessors

National University of Singapore, *Frontend Developer*

Mar 2026 – Present

- Designed and built a new multi-page section of the NUS Health & Wellbeing Department website as sole developer, wireframing user flows in Figma and Canva before implementing in WordPress via Beaver Builder
- Owned the UI/UX and information architecture across several pages, including a dedicated resource for business and HR leaders on wellbeing leadership

Centre for Strategic Infocomm Technologies, *Cybersecurity Engineer Intern*

May 2026 – Jul 2026

- Hardened a simulated enterprise network (Linux, Windows Server, pfSense) with two-factor SSH auth, network segmentation, and firewall policy enforcing least-privilege access
- Administered a Windows Active Directory domain with automated security policies, endpoint monitoring, and centralized logging, resolving live misconfigurations from security audits
- Reverse-engineered 6+ Windows malware samples using industry-standard tools (IDA Pro, WinDbg), uncovering custom packing, anti-debugging, and evasion techniques
- Reconstructed a multi-stage C2 protocol from network traffic and binary analysis, writing custom decryption tooling to recover encrypted attacker data

WorldQuant, *Quantitative Research Consultant*

Jul 2025 – Mar 2026

- Researched and translated over 20 academic finance papers into actionable trading alpha ideas
- Submitted 9 alphas using quantitative strategies, with top performers achieving Sharpe ratios above 2.0

PROJECTS

Wranglr

2026

- Built a Next.js PWA pairing with a self-hosted Tailscale daemon, enabling engineers to review and approve Claude Code changes across parallel git worktrees from mobile, independently re-verifying tests and flagging hallucinated dependencies before merge.

Remember [GitHub]

May 2026

- Built a browser-based AI smart glasses emulator using real-time face recognition and a self-building knowledge graph to help dementia patients recall people and context (1st Place, Replit Hackathon 2026)

JustPromptBro IDE [GitHub]

Jan 2026

- Built a VS Code fork with agentic AI integration for AI-assisted coding
- Implemented a Solana-based gamification system with smart contracts rewarding coding activity

SemperStroke, *Sole VR Engineer*

Mar 2025 – Jul 2025

- Led development of 3 VR cognitive and motor skills training mini-games for stroke patients in Unity, in collaboration with NUS and NTU medical students, supporting hospital-to-community care transition

TECHNICAL SKILLS AND PROFESSIONAL CERTIFICATIONS

- Programming Languages: C#, C, Python, Java, JavaScript and frameworks (React, NextJS, NestJS)
- Certificates: CS50X, CS50P, Stanford Machine Learning Specialisation, Odin Project
- Interests: Agentic AI, Cybersecurity, Tech for Social Good
